Teymurian Studios

Quick Start

The short path from menu to road victory

1. Pick a mode

Every mode now goes to a second screen. Choose the road, read the mode text, then press Start Game.

2. Take turns

On your turn, select a skill, pick a legal target, move, or end turn. The game log shows the player hint when you control that turn.

3. Clear encounters

After each encounter, recover before walking into the next group.

4. Finish the roads

Road 1 leads to Road 2, then Road 3, then Road 4 when the heroes survive. If Game Over appears and a save exists, choose Restart From Save to resume the last autosave.

Autosave loop: finish an encounter -> recover -> autosave -> restart from that save after Game Over if needed.

Controls And UI

Where to look during play

Turn Queue

Top row shows who acts next. The active icon has the large glowing box. Chess uses blue player markers and red enemy markers; allies glow green.

Game Log

Skill selections write full explanations here, including cost, range, dice, saves, and special effects.

Stats Popup

Click or tap icons to inspect units, items, and map features. The popup opens at the top-left with a darker background.

Target Highlights

During player-controlled turns, legal enemy targets are highlighted orange. Converted allies stay visually separate from monsters with green glow markers.

Fog

Fog can be toggled from the menu.

Menu Pause

Opening the game menu pauses game activity and blocks status icon clicks while music keeps playing.

11s Mode

Fast turns with sound cues and a visible clock

11s

When enabled, the player has 11 seconds to choose a turn. The last 3 seconds play the button sound, and the timer hitting 0 plays the turn-advance cue.

Actions finish

The timer advances the turn after the time limit, but it still lets actions already started finish cleanly.

Tutorial lockout

Tutorial disables 11s mode so new players can read, inspect, and learn without pressure.

Clock location

The clock-like timer sits under the player turn queue icon so it is visible without covering the board.

Menu colors

11s turns red when active. When it is off, the button has no special color so it reads like a normal inactive menu option.

Use 11s after you already know the icons. It turns the game into a quick-read tactics drill.
